

README

This assignment was attempted using two methods

Method 1 use done following the class instructions and it is in the Homework.mat file

I have added a lot of cell arrays to contain the answer for better visualization

Just need to run the file and you can see the results

Method 2 is done by using linear regression only to make predictions

It is in the file HW2remix

In line 12 `[eqn traindata G0 G1]=findLSvectors(training,0);` you can replace the 1 with 0 to not load the graph

Just need to run the file and you can see the results
